SUSTAINABILITY POLICY

Objective

We aim to develop a long term, sustainable business that delivers value for all our stakeholders including; our employees, clients, suppliers, business partners, and the wider community. By managing our business responsibly, we support the creation of a financially stable organisation.

Areas of focus

To operate sustainably we focus our activities in our key impact areas. These impact areas reflect both our opportunities to make a positive difference and manage our non-financial risks. By managing these areas well we believe we can deliver the best possible benefits for both our business and the wider world. We use both our corporate strategy and feedback from internal and external stakeholders to define these areas of focus.

Responsible business practices

Our statement of business principles and code of ethical conduct set out our shared business values and our commitment and the standards of behaviour we expect. We ensure that these practices are upheld across our business through our employee training programmes.

Clients

We believe in delivering excellent service for our clients to meet their needs. We ensure that we manage their services responsibly, adhering to any legal requirements. We have robust policies and procedures in place to ensure we meet these requirements, providing user guidance and training to our employees.

Supporting our employees

We value our employees and are committed to providing them with a workplace which is safe and secure. We aim to create a culture where every employee is treated fairly and with respect. We recognise the value that a diverse workforce can bring and we do not accept any form of discrimination. We believe in creating an inspiring workplace, committing to developing our people, giving them the right skills to help deliver our business strategy.

Local Community and Impact

We aim to make use of local suppliers, labour, transport and accommodation where possible.

We aim to minimise the effect of our work and activities on the local community and population.

We aim to minimise the transmission and effects of noise and vibration to the local communities and any residents close to the point of work.

Managing our supply chain

We aim to develop mutually beneficial relationships with our suppliers and we are committed to working with suppliers who meet our business and sustainability standards.

Environmental management

We are committed to identifying, managing and minimising the environmental impact of our business operations. We have an environmental management system in place to help us manage our impacts and ensure that we comply with all relevant environmental legislation. Our risk management process also considers environmental risks on a site-by-site basis.

Principles

Our Sustainability Policy is based upon the following principles:

- To comply with, and exceed where practicable, all applicable legislation, regulations and codes of practice.
- To integrate sustainability considerations into all our business decisions.
- To ensure that all staff are fully aware of our Sustainability Policy and are committed to implementing and improving it.
- To minimise the impact on sustainability of all office and transportation activities.
- To make clients and suppliers aware of our Sustainability Policy, and encourage them to adopt sound sustainable management practices.
- To make use and support the local community.
- To review, annually report, and to continually strive to improve our sustainability performance.

In order to put these principles into action and to reduce our negative environmental impacts as a firm and as individuals:

Minimise Travel and Carbon Emissions

- Where possible, employees should use public transport, walk or cycle to attend meetings, apart from in exceptional circumstances where this is impractical and/or cost prohibitive.
- Accommodation for site workers is located as close as possible to site reducing travel and fuel use.
- Wherever possible, employees use lower emission vehicles rather than traditionally powered vehicles.
- Wherever possible, employee travel within the UK or mainland Europe, within a 500km radius, will be undertaken by train.
- Provide employees with technology options that provide an alternative that can avoid the need to physically travel to meetings, including teleconferencing, web cams, and the efficient timing of meetings to avoid multiple trips.
- Reduce the need for our staff to travel by supporting alternative working arrangements, including home working.

Minimise water consumption and waste & maximise recycling

- Minimise and monitor use of water for construction purposes on site.
- Minimise and monitor our use of paper and other office consumables. Print double-sided to make good use of all paper used.
- As far as reasonably possible arrange for the reuse or recycling of all waste, including paper, glass, aluminum, cardboard packaging, computer supplies and redundant equipment.
- All steel materials used on site are 100% reused or recycled – zero to landfill.

Minimise Energy Consumption

- All types of heating will be controlled by timers and thermostats.
- We make use of LED lighting at our Head Office in all room and all lights turned off when not in use.
- Electric water heaters have timers fitted and turned off at weekends.
- Reduce the energy consumption of office equipment by purchasing energy efficient equipment.
- Posters are displayed throughout Head Office to encourage the 'switch if off' process.
